Benefit from our bespoke customer-centric offer

Designed to assure flawless CX while nurturing innovative network technologies.

- **NFV** testing package – to help companies go beyond what's expected and overcome network constraints through implementing properly tested virtualized network services
- **SDN** testing package – to provide streamlined network modification using automated orchestrators in real time

Perks you obtain from pitching on a1qa testing packages

We don't just test. We provide unbiased QA expertise reinforced by business and operational values, namely:

High-quality solution

Due to vast experience of testing products that realize hyper-convergent infrastructure

Reduced operational costs

Because of leveraging virtualization best practices

Improved transformation velocity

Owing to streamlined and well-coordinated QA workflow

Faster time-to-benefits

Through accelerated test infrastructure setup and test automation implementation

When to green-light professional QA assistance in testing NFV & SDN

You are an established enterprise or mid-size market player paving the way for fostered telco, IoT, high tech, computer software domains

You strive to leverage safe and high-performing software virtualization experience

You need to pass certification audit (compliance with ETSI and other regional standards)

Enable consolidated packet-based networks focusing on presented options*

Our QA pros build and gain 360-degree control over the NFV test environment, manage and orchestrate the NFV ecosystem in the way similar to the production, perform thorough individual and complex SDN components testing.

NFV testing package

Solution overview

- Functional testing
- Test automation
- Compatibility testing
- Acceptance testing
- Pre-certification testing (ETSI)

SDN testing package

Solution overview

- Functional testing
- Test automation
- Interoperability testing
- Compatibility testing
- Security testing
- Pre-certification testing (regional standards)

*a1qa performs testing either applying in-house infrastructure or client's facilities.

We harness only cutting-edge QA toolkit

Want to collaborate with a1qa? Nice choice considering...

17

years of working
in SQA

800+

QA self-starters bringing
your software to
perfection

800+

clients from 2 continents

1,500+

professionally delivered
projects

10+

in-house CoEs and R&Ds
in multiple industries

100%

QA support along the
entire SDLC

In other words, we are a next-gen QA provider accelerating innovation applying proprietary software like Aquality Automation and breathing new life into IT solutions.

Ready to conquer new software quality vertices?

Work with our QA Jedi!
